

1. SUM:

Definition: Add all the numbers in a range

Meaning $\rightarrow$ Total salary of all employee

SYNTAX:

= SUM (number1, number2, ...)

Example:

= SUM (C2:C6)

Result total salary: ₹1,75,000

2. AVERAGE

Definition: Calculates the average (mean) of the numbers
average salary of the employees.

SYNTAX:

= AVERAGE (number1, number2, ...)

Example:

= AVERAGE (C2:C6)

Result: Average salary is ₹35,000

3. MAXIMUM

Definition: Finds the largest / highest number in a range

SYNTAX:

= MAX (number1, number2, ...)

Example - MAX (C2:C6)

Result: MAX salary ₹ 45,000 highest employee salary.

4. MIN

Definition: Finds the smallest / lowest number in a range.

Syntax: = MIN (number1, number2, ...)

Example: = MIN (C2:C6)

Result: lowest employee salary ₹ 25,000

5. COUNT

Definition: counts how many cells contain numbers.

SYNTAX: = COUNT (range)

Example: = COUNT (B2:B6)

Result: There are 5 employees with salary values.

6. COUNTA

Definition: counts the number of non-empty cells by their names, use COUNTA (text or numbers)

SYNTAX: = COUNTA (range)

Example: = COUNTA (A2:A6)

Result: This means 5 employee names are present.

FIND 2 MAX salary - large:

7. LARGE

Definition: LARGE finds the N^{th} largest value from a range

SYNTAX:

= LARGE (range, k)

Result: ₹ 40,000 highest salary

~~Unit~~

8. UNIQUE

Definition UNIQUE returns only the different / Unique values from a range Duplicate values are removed

SYNTAX:

= UNIQUE (array)

Example: (=UNIQUE (B2:B6))

If you want to this formula use it
= LARGE (UNIQUE (C12:C121), 2). you find the large salary for employee.

FIND 3 MIN Salary:

= SMALL (UNIQUE (C12:C121), 3)

1. FIND TOTAL SALARY OF MARKETING team:

Definition: SUMIF

SUMIF adds values based on one condition.

SYNTAX:

= SUMIF (range, criteria, sum-range)

Department = B2:B6 Salary = C2:C6

Example:

= SUMIF (B2:B6, "Marketing", C2:C6)

Result: £1,000

2. Find total salary of employee who are all earning 10000

Formula: = SUMIF (G12:G12, "10000", G12:G11)

= SUMIF (G12:G12, 10000, G12:G11)

Salary column Salary column
 earning salary.

3. Find total salary of employee who are all earning above 10000

= SUMIF (G12:G12, ">10000", G12:G11)

4. Find average salary of West region employees.

AVERAGEIF

AVERAGEIF calculates the average of values that meet one condition.

Syntax:

= AVERAGEIF (range, criteria, average_range)

Example:

= AVERAGEIF (B2:B6, "West", C2:C6)

Result: £30,000

Region range
B2:B6 — Department range
West — condition
region
C2:C6 — Salary range.

5. FIND MAXIMUM salary in R&D department

MAXIFS

Find the ~~at~~ highest value that meets one or more conditions.

SYNTAX:

= MAXIFS (max_range, criteria_range, criteria)

Example

= MAXIFS (C2:C6, B2:B6, "R&D")

C2:C6 → salary range

B2:B6 → Department range

"R&D" → condition.
